GENERAL INDEX TO VOLUME III.

Adjustment of a small equatorial, H. A. Howe.....I, 131; II, 193
Alaska boundary survey, Otto J. Klotz.....348, 395
Alaskan boundary question (note)..... 534
Algebra, Hall and Knight (book notice)..... 160
Algol type, Minima of the variable stars of the—J. A. Parkhurst.....36, 149
variable, A remarkable—J. A. Parkhurst 375
Variables of—..... 36
Almanacs, R. W. McFarland.....IV, 114; V, 303
American association for the advancement of science (note)..... 156
mathematics and astronomy, The services of Benjamin Peirce to—
T. J. J. See..... 49
Andromedæ, 103 T—(note) P. S. Yendell..... 380
Apparent position of orbit of companion of binary star, The determination
of—J. Harrington Boyd..... 19
Aratus, The phenomena of—(note)..... 328
Argon and helium, Liquified—(note)..... 154
Arnold, Charles P., A large meteor..... 159
Articles by J. Morrison (note)..... 379
Asteroids, Numbering of recently discovered—(note)..... 40
Numbers for the—(note)..... 160
Astronomers, The present work of—(note)..... 100
The work of prominent—(note)..... 155
Astronomische Gesellschaft zone, 13° 50′ to 18° 10′ (note)..... 268
Astronomy at the University of Chicago, School of—(note)..... 43
in the high schools, E. Miller..... 162
Popular—Mary Proctor (note)..... 158
Popularized—(note)..... 47
Study of—J. M. Taylor (note)..... .....
The Herschels and modern—(book notice)..... 154
The services of Benjamin Peirce to American mathematics and—
T. J. J. See..... 49
The spectroscope in—Taylor Reed..... 141
Astronomical and physical society of Toronto, John A. Copeland (note)..... 160
observation (note)..... 156
observations, Climate as related to—Wm. H. Pickering..... 464
problem of Dr. See (note)..... 483
problems of the twentieth century (note)..... 536
society, The Meaford (note)..... 485
work of Dr. W. L. Elkin, S. C. Chandler..... 392
Astro-Photographic work at Columbia College observatory (note)..... 211
photography, The new—(note)..... 536
Atmosphere of Mars, W. W. Campbell (note)..... 438
Water vapor in the—(note)..... 216
Barnard, E. E., Comet 1884, II (note)..... 38
Four little sky travelers..... 143
goes to Yerkes observatory (note)..... 46
leaving Lick observatory (note)..... 158

Observations of planets (note) 100
On photographic discovery of Comet V, 1892 13
The total lunar eclipse of 1895, Sept. 3 (note) 102
to be at Yerkes observatory (note) 48
To observe variable stars (note) 533
Barnard's comet of 1884, Probable observation of—Lewis Swift 17
measures of the Saturnian system (note) 427
Baron Fourier, Historical eulogy on Laplace 1
Beginners, Observations for—W. W. Payne ..... 14; II, 121
Behr, O. C., An old telescope (note) 488
Binary star, The determination of apparent position of orbit of companion of—J. Harrington Boyd 19
systems by the use of the spectroscope, A method of measuring the distances, dimensions and masses of—F. R. Moulton 337
Book notices 440
Boundary survey of Alaska, Otto J. Klotz 348, 395
Boyd, J. Harrington, The determination of apparent position of orbit of companion of binary star 19
Boys, C. V., On the Newtonian constant of gravitation 128
Bradbury, F., Mira, *o* Ceti (note) 262
Brashear family, Sad news from— 438
J. A., maker of telescopes (note) 48
optical works, Instruments being made at the—(note) 485
Brooks' comet *d*, 1895 327
Brooks, Wm. R., Comet Brooks' *d*, 1895 (note) 270
Discovery of the comet Brooks' *d*, 1895 (note) 211
Smith observatory (note) 155
Brown, E. L., (note) 440
Campbell, W. W., Mars' atmosphere (note) 438
Cape of Good Hope observatory, Harold Jacoby 218
Celestial phenomena for the year 1896, H. C. Wilson 236
Ceres, Pallas, Juno and Vesta (note) 43
Chandler and Lamp, Elements of Comet *a* 1896 (note) 436
Chandler, S. C., Astronomical work of Dr. W. L. Elkin 392
Change of earth's axis (note) 267
Chemistry, The spectroscope in recent—R. A. Gregory 70
Chronological notes, I, R. W. McFarland 441
Clark, Alvan (note) 159
Clarke, Henry L., The life-history of star systems 489
Climate as related to astronomical observations, Wm. H. Pickering 464
Clusters, Variable star—Edward C. Pickering 197
Colored lunar band, Lewis Swift (note) 269
Columbia college observatory (note) 157
account of astro-photographic work, Harold Jacoby (note) 211
Comet *a* 1895, Discovery of a new—(note) 95
1896, Elements of—Chandler and Lamp (note) 436
Observations of—J. A. Parkhurst 436
Swift, New elliptical elements of—(note) 151
1896, (Perrine-Lamp) Ephemeris of—(note) 436
b 1886 (Swift), Elements and ephemeris of—(note) 482
by accident, H. C. Wilson (note) 432
c 1895, Discovery of a new—H. C. Wilson (note) 209

Ephemeris of—for April 436
(Perrine) C. D. Perrine 245, 279
and the Perrine-Lamp comet *a* 1896 (note) 434
Elements of—(note) 265
Ephemeris of—C. D. Perrine 327
observed by Sperra (note) 265
d 1895, Brooks' 327
Wm. R. Brooks (note) 270
Discovery of—Wm. R. Brooks (note) 211
Elements and ephemeris of—(note) 266
Discovery of a new—H. C. Wilson (note) 209
Faye's—on Feb. 1 327
How I found the—Lewis Swift 96
1884 II, Barnard (note) 38
of 1884, Probable observation of Barnard's—Lewis Swift 17
Perrine (note) 371
1895 II (Swift) and Lexell's comet (note) 264
The return of Faye's periodic—H. C. Wilson (note) 152
V 1892, On photographic discovery of—E. E. Barnard 13
1879 V, The orbit of—(note) 328
notes 209, 264, 432, 482
for February 327
1892 III (Holmes), Orbit of—(note) 39
Comets, Observations of Faye's and Swift's—H. C. Wilson (note) 209
Companion of a binary star, The determination of the apparent position of the orbit of the—J. Harrington Boyd 19
Configuration of the planets and the "star of Bethlehem." (note) 47
Constant of gravitation (notes) 153, 328
of gravitation, C. A. Young (note) 382
of gravitation, Wm. A. Rogers 316
of gravitation, On the Newtonian—C. V. Boys 128
Constellations for October, H. C. Wilson 93
Copeland, John A., Astronomical and physical society of Toronto (note) 160
Corona in daylight, New way of photographing the—(note) 488
Cruise to Russia, Norway and the midnight sun for total eclipse Aug. 8th (note) 488
Determination of the apparent position of the orbit of the companion of a binary star, J. Harrington Boyd 19
Dimensions of stellar systems, The absolute—H. C. Wilson (note) 216
Discovery of a new comet, (*a* 1895) (note) 95
of a new comet, Brooks *d* 1895, Wm. R. Brooks (note) 211
of an unseen body in the stellar system, F 70 Ophiuchi, Eric Doolittle, preceding 230
of Comet *c* 1895, H. C. Wilson (notes) 209
of Comet *d* 1895, H. C. Wilson (note) 209
of Comet V 1892, On photographic—E. E. Barnard 13
of the triple star F 70 Ophiuchi, Dr. See's—(note) 268
Distances, dimensions and masses of binary systems by the use of the spectroscope, A method of measuring the—F. R. Moulton 337
Doolittle, Eric, Some interesting results of Helmholtz's theory of solar contraction 21
The discovery of an unseen body in the stellar spectrum, F 70

Ophiuchi, preceding 230
The variation of latitude 105
Earth, The mean density of the—J. H. Poynting 232
Easter by R. W. McFarland (note) 382
note of correction, R. W. McFarland (note) 486
Eclipse, Aug. 8, Cruise to Russia, Norway and the midnight sun (note) 488
of the moon, March 10, Lewis Swift (note) 269
of the moon, Feb. 28, 1896, A partial— 327
of the moon at Alta, Iowa, The total—David E. Hadden (note) 104
of the sun, Feb. 13, 1896, An annular— 326
of 1895, The total lunar—Sept. 3, 1895, E. E. Barnard (note) 102
The scientific value of a total lunar—Caroline E. Furness 109
(Total)—of the moon Sept. 3, 1895 (note) 44
Eclipses and occultations, The graphic construction of—Wm. F. Rigge 183
II. Solar eclipses, Wm. F. Rigge 247 310
III. Occultations, Wm. F. Rigge 353
IV. Occultations of clusters, Wm. F. Rigge 414
V. Rapid method, Wm. F. Rigge 454
of the sun, Aug. 20 and Sept. 18, 1895 (note) 44
Eddie, L. A., Curious meteor trail seen at Grahamstown Oct. 22 (note) 271
L. A., Spectrum of γ Argus 125
Elkin, W. L., Astronomical work of—Dr. S. C. Chandler 392
Elliptical elements of Swift's comet (note) 151
Elongation, Latitude by—Otto J. Klotz 199
Emerson McMillan observatory, university of Ohio (note) 439
Ephemeris of short period variables, Paul S. Yendell, October, 94, November, 149, December, 207, January 261
The solar—J. Morrison 25, 86
Equilibrium of the oceans, The stability of the—T. J. J. See 178
Erratum, Lewis Swift (note) 272
Eulogy on Laplace, Historical—Baron Fourier 1
Faye's and Swift's comets, Observations of—H. C. Wilson (note) 209
comet on Feb. 1 327
Fixed stars, VI, W. H. S. Monck 62
Flanery, David, Mira and R Leonis 262
Mira, o Ceti 262
Four little sky travelers, E. E. Barnard 143
Furness, Caroline E., The scientific value of a total lunar eclipse 109
Tycho Brahe 221
Galileo's work on Saturn's rings, A historical correction—E. A. Partridge and H. C. Whitaker 408
General notes 42, 99, 153, 210, 267, 328, 379, 437, 483, 534
Gilliss Chile catalogue of stars (note) 438
Goodsell observatory, Visitors at—(note) 44
Graphic construction of eclipses and occultations, I, Wm. F. Rigge 183
II. Solar eclipses, Wm. F. Rigge 247
II. Solar eclipse, Wm. F. Rigge 310
III. Occultations, Wm. F. Rigge 353
IV. Occultations of clusters, Wm. F. Rigge 414
V. Rapid method, Wm. F. Rigge 454
construction of eclipses (note) 328
Grating spectroscope for small telescope, David E. Hadden 84

Gravitation, The constant of—(notes).....153, 328
The constant of—C. A. Young (note) 382; Wm. A. Rogers..... 316
On the Newtonian constant of—C. V. Boys.....128, 167
Great German telescope, The—(note)..... 483
Gregory, R. A., The spectroscope in recent chemistry..... 70
Growth and magnitude of the sidereal heavens, W. H. Lamaster..... 226

Scientific value of a total lunar eclipse, Caroline E. Furness 109
See's astronomical problem (note) 483
See, T. J. J., Discovery of the triple star 70 Ophiuchi (note) 268
Stability of the equilibrium of the oceans 178
The services of Benjamin Peirce to American mathematics and history 49
Translator of historical eulogy on Laplace 1
September and October, Planets notes for—H. C. Wilson, 33; tables 34
Services of Benjamin Peirce to American mathematics and astronomy, T. J. J. See 49
Short-period variables, Ephemeris of—Paul S. Yendell, November, 149; December, 207; February, 325; March, 376; May, 480 532
variable stars, Observations of—W. E. Sperra 404
Sidereal heavens, The growth and magnitude of—W. H. Lamaster 226
"Signals from Mars," The—(note) 47
Sky travelers, Four little—E. E. Barnard 143
Small equatorial, The adjustment of a—H. A. Howe, I, 132, II 193
telescope, Spectroscope for—David E. Hadden (note) 152
Smithsonian institution for the year ending June, 1894, Report of—(note) 383
Solar contraction, Some interesting results of Helmholtz's theory of—Eric Doolittle 21
corona photographed in daylight, D. E. Packer 361
eclipse, Meteors seen during a—Lewis Swift (note) 159
ephemeris, The—J. Morrison 25, 86
Solving Kepler's equation, An important method of—F. R. Moulton 136
Spectroscope, A method of measuring the distances, dimensions and masses of binary systems by the use of the—F. R. Moulton 337
for small telescope, David E. Hadden (note) 152
(grating) for small telescope, David E. Hadden 84
in astronomy, Taylor Reed 141
in recent chemistry, The—R. A. Gregory 70
in the study of variable stars, Taylor Reed 333
Spectrum of γ Argus, L. A. Eddie 123
of Mira (o Ceti), H. C. Wilson 390
of the magnesium arc, Normal—(note) 213
The invisible—(note) 215
Sperra, W. E., Bright meteor (note) 382
Jupiter occulted by a bright meteor (note) 264
Meteor at midday 264
Observations of Perrine's comet (note) 265
Observations of short-period variable stars 404
Remarkable meteor (note) 270
Stability of the equilibrium of the oceans, T. J. J. See 178
Star clusters, Variable—Edward C. Pickering 197
Catalogue, Dr. Chandler's third—(note) 532
in Centaurus, A new—E. C. Pickering (note) 380

systems, The life-history of star—Henry L. Clarke 489
"Star of Bethlehem," Configuration of the planets and the—(note) 47
The determination of the apparent position of the orbit of the companion of a binary—J. Harrington Boyd 19
Stars VI. The fixed—W. H. S. Monck 62
Stellar system, F 70 Ophiuchi, Discovery of an unseen body in the—Eric Doolittle 230
systems, The absolute dimensions of—H. C. Wilson (note) 216
Stewart, Dr. De Lisle, at Harvard college observatory (note) 267
Stone, Ormond, F. P. Matz 452
(note) 101
Study of astronomy, J. M. Taylor (note) 377
of the variable stars, P. S Yendell 446
of variable stars, The spectroscope in the—Taylor Reed 333
Sun, An annular eclipse of—February 13 326
Eclipses of—Aug. 20 and Sept. 18, 1895 (note) 44
spots, Observation of—(note) 328
Total eclipse of—Apr. 16, 1893 (note) 211
Surface-markings of the moon, A new theory of—E. Miller 273
of the moon criticised, Mr. E. Miller's theory on the—S. L. B. (note) 383
Swift, Lewis, Colored lunar band (note) 269
Eclipse of the moon (note) 269
How I found the comet (note) 96
Meteors seen during a solar eclipse (note) 159
Probable observation of Barnard's comet of 1884 17
Swift's new comet (note) 482
The Lowe observatory 465
The lunar eclipse at Lowe observatory (note) 104
Swift's comet, New elliptical elements of—(note) 151
new comet, Lewis Swift (note) 482
Systematic error in visual observations (note) 533
Taylor, J. M., The study of astronomy (note) 377
Telescope aids ordinary vision, W. W. Payne 81
II, Adjustment of a small equatorial—H. A. Howe 193
Grating spectroscope for small—David E. Hadden 84
An old—O. C. Behr (note) 488
Planetary photography with a reflecting—J. M. Schaeberle 280
Spectroscope for small—David E. Hadden (note) 152
The great German (note) 483
Terrestrial, Helium—W. W. Payne 16
Theory of solar contraction, Some interesting results of Helmholtz's—Eric Doolittle 21
"The sun" Professor Young (note) 328
Thomas Foreign Tourist Co. of Philadelphia cruise to Russia, Norway and the Midnight Sun (note) 488
Todd, D. P., (note) 101
Total eclipse of the moon, Sept. 3, 1895 (note) H. C. Wilson (note) 44, 101
lunar eclipse of 1895, Sept 3, E. E. Barnard (note) 102
lunar eclipse, The scientific value of a—Caroline E. Furness 109
eclipse of the sun, April 16, 1893 (note) 211
eclipse expedition to Japan, Aug. 1896, from Lick observatory (note) 379

Triple star 70 Ophiuchi, Dr. See's discovery of—(note) 268
Twilight arc, Micrometric measures of the diameters of Mars giving beside the size and the ellipticity of the planet apparent evidence of a—Percival Lowell 287
Tycho Brahe, Caroline E. Furness 221
U Coronæ (5484), Variable star—P. S. Yendell (note) 150
Geminorum (2815) (note) 532
University of Chicago, School of astronomy at the—(note) 43
at Illinois, New observatory for—(note) 488
Uranus, The satellites of— 480
Uranus' satellites for June 527
Variables of the Algol type 36
Ephemeris of short period—Paul S. Yendell ...October 95, November 149
Maxima and minima of long period—for November, J. A. Parkhurst 94
Variable star, A new kind of—J. A. Parkhurst (note) 214
clusters, Edward C. Pickering 197
8598 U Pegasi, Paul S. Yendell 400
5484 U Coronæ, P. S. Yendell (note) 150
Mira, J. A. Parkhurst 165
Mira (*o* Ceti) H. C. Wilson (note) 150
notes, J. A. Parkhurst 533
of the Algol type, New—E. C. Pickering 376
5190 R Camelopardalis, J. A. Parkhurst (note) 431
